* Since we merged and converted this registry it loads more slowly. We *
* know it should load faster and are working on ways to achieve that. *
* Thank you for your patience. *

Service names and port numbers are used to distinguish between different services that run over transport protocols such as TCP, UDP, DCCP, and SCTP.

Service names are assigned on a first-come, first-served process, as documented in [\[RFC6335\]](#).

Port numbers are assigned in various ways, based on three ranges: System Ports (0-1023), User Ports (1024-49151), and the Dynamic and/or Private Ports (49152-65535); the difference uses of these ranges is described in [\[RFC6335\]](#). System Ports are assigned by IETF process for standards-track protocols, as per [\[RFC6335\]](#). User Ports are assigned by IANA using the "Expert Review" process, as per [\[RFC6335\]](#). Dynamic Ports are not assigned.

The registration procedures for service names and port numbers are described in [\[RFC6335\]](#).

Assigned ports both System and User ports SHOULD NOT be used without or prior to IANA registration.

```
*****
* PLEASE NOTE THE FOLLOWING: *
* *
* ASSIGNMENT OF A PORT NUMBER DOES NOT IN ANY WAY IMPLY AN *
* ENDORSEMENT OF AN APPLICATION OR PRODUCT, AND THE FACT THAT NETWORK *
* TRAFFIC IS FLOWING TO OR FROM A REGISTERED PORT DOES NOT MEAN THAT *
* IT IS "GOOD" TRAFFIC, NOR THAT IT NECESSARILY CORRESPONDS TO THE *
* ASSIGNED SERVICE. FIREWALL AND SYSTEM ADMINISTRATORS SHOULD *
* CHOOSE HOW TO CONFIGURE THEIR SYSTEMS BASED ON THEIR KNOWLEDGE OF *
* THE TRAFFIC IN QUESTION, NOT WHETHER THERE IS A PORT NUMBER *
* REGISTERED OR NOT. *
